

This document provides information prescribed by Government about TWUSUPER’s Balanced (MySuper) investment option. You can use the information on this page to compare MySuper products between funds.

Return

The 10 year average return after fees and tax is 7.11% pa as at 30 June 2023.

Return Target

The Return Target for 2023 to 2032 is currently 3.51% per year above inflation (CPI), after fees and taxes. This is a prediction only. Future returns cannot be guaranteed.

Comparison between Return Target and Return

● Past 1 year return
 ● 10 year average return
 ● Average return target

Level of investment risk

Medium to High.

Negative returns are expected 3 to less than 4 years out of every 20 years.

The higher the expected return target, the more often you would expect a year of negative returns.

Statement of fees and other costs

\$593 per year (based on a member with a \$50,000 balance).

Please note that these costs are estimated for the current financial year.

Please note: The Return Target above is different to the Balanced (MySuper) Investment Objective stated in TWUSUPER’s Product Disclosure Statement (PDS) as it was calculated in accordance with specific legislative requirements for this document.

Explanation of terms

This section provides information on the terms used in the Product Dashboard about TWUSUPER's Balanced (MySuper) investment option.

CPI

CPI means the Consumer Price Index, ordinarily used as a measure of inflation. In Australia, the CPI measures the changes in the price of a fixed basket of goods and services acquired by ordinary household consumers across the country's different capital cities.

Investment risk

Investment risk can be thought of as the chance that the return (ie how much your investment earns) from your investment will be different to what you expect. You need to be aware that the value of your super account may rise or fall but, over time, highs and lows in investment returns will be smoothed out and your retirement savings should grow. There is the risk that you may get back less than the amount of contributions paid in by you and your employer. This is due to the level of investment returns (including negative returns), the impact of tax, expenses and fees, and the cost of any insurance.

Level of investment risk

All investments have some level of risk. Generally to get higher returns, over the long term you need to be willing to accept a higher level of risk. Over the short to medium term this can result in increased volatility, including the risk of negative earnings. If you have a long investment timeframe, you may want to consider investments that have a high proportion of growth assets. On the other hand, if you have a short timeframe and it is important for you to avoid short term falls in the value of your super, you may want to consider investments that have a higher proportion of defensive assets.

TWUSUPER's Balanced (MySuper) level of investment risk is rated as medium to high. It may suit members who want to invest for over 5 years and accept a medium level of risk and fluctuations in returns.

The Standard Risk Methodology (SRM) outputs are calculated using a number of assumptions about how asset classes are forecast to perform in the future, including estimated returns, how much volatility there is likely to be and how different asset classes are related. The output is produced on the basis of the probability of a negative return in x years out of 20. The expected chance of loss is on a gross of tax basis excluding imputation credits, and is before administration fees and after taking account of investment management fees. A conservative approach to incorporating expectations for investment manager outperformance has been taken. These are estimates only and are not guaranteed. Actual outcomes may differ significantly from the estimates.

Return*

The net return is the average annual return over 10 years to 30 June 2023 after taxes, administration fees and investment fees for the investment option.

Return target*

The return target is an estimate of the expected return above inflation (after fees and costs) over a 10-year period. This is a prediction only. Future returns cannot be guaranteed.

Please note that the return target shown in the Product Dashboard is different to the Balanced (MySuper) investment objective stated in the Product Disclosure Statement (PDS) as it was calculated in accordance with specific legislative requirements for Product Dashboard purposes.

Fees and costs

Shows the fees and costs charged on \$50,000 invested in TWUSUPER's Balanced (MySuper) investment option. The fees and costs include investment fees, administration fees plus any indirect costs for the Balanced (MySuper) investment option. For more information, please refer to the PDS at twusuper.com.au/pds.
